

Serving the plastics industry for 35 years.

The Plastics Group can recycle materials that are currently unprocessable – scrap such as chunks/purgings, film and reject parts can all be converted back into usable resin pellets. The end result is a recycled product, which translates into substantial savings for you.

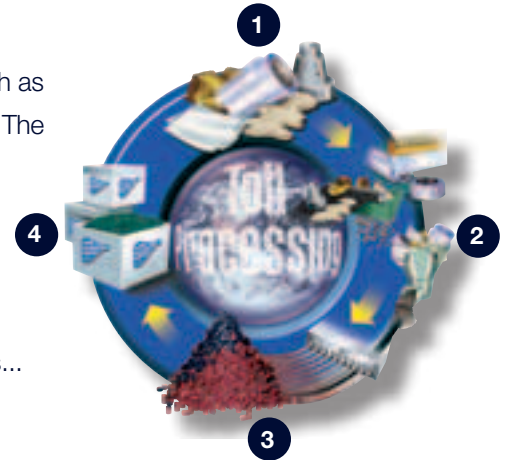

The Plastics Group can:

Step 1 : Take your film scrap, purging, parts & chunks...

Step 2 : Process them through guillotining, grinding, densifying & shredding...

Step 3 : Custom blend them if necessary & extrude them back into usable resin pellets...

Step 4 : And ship you back recycled resin that can be used again.

The Plastics Group offers complete toll processing services for your resin or scrap reclaim/recycling including:

Grinding

- Chunks, parts and drums

Guillotining

- The cutting of large film rolls or chunks

Densifying

- For converting film and light bulk density materials into a processable form

Custom Blending to Specification

- The blending of colorants or ingredients to specified requirements

Extruding

- The final process in returning your scrap into usable resin pellets
